No Tangle Tagline with Snaphook

Tangle-resistant coated taglines are specifically designed to be a safe alternative to traditional rope taglines. Traditional rope taglines can easily become entangled in a person's legs or other surrounding objects, because when the crane is lifting or carrying the goods, the goods may swing and hit other objects or cause danger to people on the ground.

Those who are on the ground in a safe position use the red tail tagline to turn the cargo so that the cargo does not collide with surrounding objects.

The tagline is coated with anti-corrosion and non-slip material, which is not easily saturated by liquids and oils, can be used for a long time, always maintains its shape, and has a strong grip.

Anti-tangle coated tagline provides rigidity to prevent entanglement with people and other objects, they always maintain their shape and are easily rolled up for storage, while also providing better grip for more well controlled.
